

InSight

Data Analysis for Asset and Maintenance Data

Optimize your investments with smart data analysis

Purchasing a data management system is a key decision for a utility. A good data management system guarantees data integrity, availability and security; it optimizes workflows and supports decision-making by providing important insights into the assets via data analyses. A system that fulfils these requirements has the potential to deliver huge time and cost savings for a utility.

OMICRON's Asset and Data Management System (ADMO) focuses on delivering optimal maintenance support as well as advanced setting management and data administration functionalities for asset data. Thus, the system represents a comprehensive basis for additional data analysis. The complementary web application InSight builds on the data that is contained in the ADMO database. It allows utilities to gain unique insights into this information, enabling them to develop smarter, data-driven maintenance strategies, to optimize planning and scheduling activities, and to reduce the risk of compliance-related liabilities and fines.

InSight technology

InSight is a web application that graphically processes data in so-called widgets and allows to set up notifications based on that information. InSight communicates with ADMO via a defined application interface (ADMO API). For security reasons, data provided to InSight is read-only.

Access for an expanded user group

Because InSight is a web application with a central Identity Management System (IMS), access to the platform is not restricted to ADMO users. This enables a wider user group within the utility (for example management or compliance personnel) to access the analysis capabilities of InSight.

Purchasing InSight

InSight is included with an ADMO maintenance contract at no additional charge. It is not available for ADMO Stand-alone customers or for ADMO Client Server customers without a valid maintenance contract.

The InSight dashboard offers 12 pre-configured widgets that facilitate decision-making with regard to investment strategies and maintenance planning.

Customize your dashboard

Add any widgets you like to your dashboard. Add the same widget several times with different filter settings to get a quick side-by-side comparison. For example, compare the maintenance status of two locations.

Switch your view

Switch between a graphical representation and a table view of the widget information to see more data details.

Print and export data

Print widgets or copy and paste tables into other applications, such as Microsoft Excel®.

Use flexible filters

Each widget features flexible filters that make it easy to customize the displayed information and allow for targeted selection of relevant data. For example: view data for a specific location, asset kind, time span, responsible person or event type.

Your benefits

- > Enables data driven decision-making
- > Supports planning, compliance, asset and maintenance management
- > Included in the ADMO maintenance contract
- > Uses already existing data from ADMO

Visualize your data with customizable widgets

Assets by manufacturing year

This widget provides information regarding the age structure of assets. The widget lists different assets by manufacturing year and is intended to help asset managers plan their maintenance and renewal strategies.

Filter by: location, asset kind, manufacturer and time span

Maintenance due by asset kind

This widget provides an overview of open maintenance tasks per asset kind per year. The widget supports long-term personnel and maintenance planning.

Filter by: location, responsible person, asset kind and time span

Open follow-up tasks

This widget lists and provides information about all due and overdue follow-up tasks. The widget supports maintenance and personnel planning activities.

Filter by: location, asset, responsible person and follow-up status

Status	Due date	Follow-up description	Location	Asset kind
Overdue	2018-06-01	Take second reading	Fairview400 kV/Hill East	Energy meter
Due	2019-05-15	Read out fault recording for disturbance on May 3rd	Fairview20 kV/Chey Chase	Fault recording system
Due	2019-05-22	Take second reading within two weeks	Fairview400 kV/Noma	Energy meter
Due	2019-05-31	Follow up with Frank regarding misoperation	Fairview400 kV/Capitol Hill	Circuit breaker
Due	2019-05-31	Change out battery	Fairview20 kV/Chey Chase	Protective relay

Total open follow-ups: 5 Total follow-ups due: 4 Total follow-ups overdue: 1

Maintenance status overview

This widget shows the current maintenance status of all assets in the system or at a particular location. The visualization provides the same maintenance status overview, which is a prominent element in the ADMO interface.

Filter by: location, asset kind and responsible person

Maintenance tasks per responsible person

This widget provides an overview of the performed and planned maintenance activities of individual responsible persons. The data assists maintenance managers with their personnel and resource planning.

Filter by: location, responsible person, asset kind, event type and time span

Misoperations

This widget provides a summary of all misoperations that caused network disturbance events. The data is organized by manufacturer and manufacturer type to identify fault-prone equipment easily.

Filter by: location, manufacturer and time span

Network disturbances

Event ID	Date	Disturbance cause	Protection reaction	Type of fault
NS 1124	2019-05-08	Lightning strike	Auto-reclosure successful	
NS 1116	2018-09-13	Misoperation	Trip by backup protection	
NS 1117	2018-11-11	Misoperation	Trip by backup protection	
NS 1118	2018-12-04	Lightning strike	Auto-reclosure successful	
NS 1119	2018-12-18	Ice on line	Auto-reclosure successful	
NS 1120	2018-12-21	Ice on line	Trip	

Number of network disturbances: 6

Network disturbances

This widget provides an overview of all network disturbances in the system. It lists all network disturbance events and associated data like involved feeders, protection reaction, disturbance cause or supply interruption during a specified time span.

Filter by: location, protection reaction, supply interruption and time span

Asset report

Asset kind	Asset type	Serial No.	Location	Asset out of compliance	Monitoring status
Protective relay	Digital	457271f31	Berkshire1110 kVFeeder 1	no	Not monitored
Circuit breaker	Live tank SF6 breaker	457271f32	Berkshire1110 kVFeeder 1	no	Not monitored
Communication system	Type not specified	457271f33	Berkshire1110 kVFeeder 1	no	Not monitored
Control circuitry	Other	457271f34	Berkshire1110 kVFeeder 1	no	Not monitored

Total assets: 541

Asset report

This widget provides a table that includes important maintenance information for compliance reporting, such as asset maintenance status, date of the last two maintenance events, maintenance program and maximum maintenance interval.

Filter by: asset kind and location

Custom widgets

In case of very specific analysis requirements, it is possible to order custom widgets. This allows customers to specify widgets to best fit their information needs. A custom widget can be implemented and delivered via a plug-in infrastructure at any time.

Get an overview with InSight maps

The map section provides an overview of the maintenance status of all assets in the system by location. Selecting a substation provides additional information about the number of open maintenance or follow-up tasks at that particular location and which assets are concerned.

Declutter the map

Hide all locations with no open tasks (green).

Customize your view

Create favorites and persist maps with different zoom levels and filter settings.

Filter your data

Show the maintenance status for a specific asset, timeline or responsible person.

UW Berlin

Total assets:	88
Maintenance due:	22
Maintenance overdue:	0
Out of compliance:	0
No maintenance defined:	2
Open follow-up tasks:	5

Maintenance due	4	Asset kind	Manufacturer	Serial No.
No maintenance defined:	2	Protective relay	Manufacturer A	4572710r41
Open follow-up tasks:	3	Protective relay	Manufacturer A	457271d81
		Protective relay	Manufacturer B	457271fr1

See which assets are involved

Get a list of all assets with open tasks at the location.

No asset has a maintenance or follow-up task due or overdue.

At least one asset has a maintenance or follow-up task due.

At least one asset has a maintenance or follow-up task overdue.

In the Notifications section users have the option to configure periodic e-mails to support various management, scheduling and reporting tasks. The notifications are sent out via the existing office mail system and can be set up for InSight users as well as non-InSight users.

Notifications can be created in the notification area, or directly at the widget, automatically using the applied filters to configure the e-mail notification.

Each e-mail notification contains an attachment with up-to-date data, as predefined with filters.

Event ID	Date	Disturbance cause	Protection reaction	Type of fault
MS 1101	2018-08-02	Lightning strike	Auto-recovery successful	
MS 1102	2018-08-12	Misoperation	Try by backup protection	
MS 1103	2018-11-13	Misoperation	Try by backup protection	
MS 1104	2018-12-04	Lightning strike	Auto-recovery successful	
MS 1105	2018-12-18	Open line	Auto-recovery successful	
MS 1106	2018-12-21	Out on line	Try	

Select sending frequency to be daily, weekly, monthly or yearly.

Define the recipients of the notifications, then add custom subject and text to the emails.

Notifications for **OPERATIONS MANAGER**

- > Upcoming and scheduled maintenance tasks
- > Completed maintenance tasks
- > Overall open follow-up tasks

Notifications for **TESTER**

- > My planned events
- > My open maintenance tasks
- > My open follow-up tasks

Notifications for **SETTINGS ENGINEER**

- > Planned settings changes
- > Completed settings changes
- > Required review of settings

Notifications for **ASSET MANAGER**

- > Misoperations of assets
- > Network disturbances
- > Asset maintenance and status reports

OMICRON is an international company serving the electrical power industry with innovative testing and diagnostic solutions. The application of OMICRON products allows users to assess the condition of the primary and secondary equipment on their systems with complete confidence. Services offered in the area of consulting, commissioning, testing, diagnosis and training make the product range complete.

Customers in more than 160 countries rely on the company's ability to supply leading-edge technology of excellent quality. Service centers on all continents provide a broad base of knowledge and extraordinary customer support. All of this together with our strong network of sales partners is what has made our company a market leader in the electrical power industry.

The following publications provide further information on the solutions described in this brochure:
