

## CMC Accessories for Low- and Medium Voltage Applications

1 hour

English

Wprs19en

In this webinar, you will get an overview of accessories for CMC test sets. These accessories enable additional applications as found in low and medium-voltage installations. Examples are protection testing in installations with voltage and current sensors, arc protection testing, or wiring checks.

### Objectives

- > Overview of the available accessory products and their applications
- > Understanding how the accessory products work
- > Usage with the CMC test equipment

### Content

- > Protection test in systems with voltage and current sensors
- > Triggering on binary signals with AC voltage
- > Testing of devices in low voltage systems up to 1000 V L-L rated voltage (e.g. 690 V applications)
- > Testing of arc protection in low and medium voltage systems
- > Polarity test from instrument transformers to a protection device

### Solutions

CMC test sets  
CMC accessories

### Audience

Distribution system operator,  
Municipalities, Industrial facilities,  
service providers, project  
companies

### Prerequisites

Fundamentals of electrical  
engineering
