

Save Time with StationScout Webinar Series

 4 sessions à 1 hour

 English

 # Wpuc25en

The StationScout Time Saving Hints webinar series is beneficial for learning how to automate routine tests, speed up processes, and improve accuracy with StationScout. Whether working with IEC 61850 or IEC104, this series will help streamline workflows and achieve better results. Enhance efficiency and expertise by participating in these informative sessions.

Objectives

- ▶ Gain essential knowledge of the IEC 104 protocol
- ▶ Learn practical skills for automated testing with StationScout
- ▶ Enhance your substation automation projects
- ▶ Network with industry experts and colleagues

Content

The webinar series consists of four sessions:

- ▶ Webinar 1: **Automated RTU/Gateway Testing via IEC 61850 and IEC 60870-5-104**
Wednesday, March 26 | 16:00 CEST
- ▶ Webinar 2: **From Terminal to Control Center: Automated Closed-Loop Testing**
Wednesday, May 21 | 16:00 CEST
- ▶ Webinar 3: **Local HMI Testing Advice: Semi-automated Signal Validation**
Wednesday, September 24 | 16:00 CEST
- ▶ Webinar 4: **How to Verify Sampled Values and Create System Verification Reports**
Wednesday, November 12 | 16:00 CEST

Solutions

StationScout, substation automation, closed-loop testing, control center, IEC 60870-5-104, IEC 61850, signal validation, verification of sampled values, reporting

Audience

Control and protection engineers from electric utilities or companies who utilize IEC 61850 and IEC 104 communication or plan to use it.

Prerequisites

Basic knowledge of substation automation systems
